---

**SUMMARY OF PRISM RANKING RESULTS:**

- **Distribution:** Widespread
- **Estimated number of infested sites:** 32+
- **PRISM Invasiveness Rank§:** Moderate

---

**A. DISTRIBUTION AND ABUNDANCE (KNOWN/POTENTIAL):**

1. What is the species distribution and abundance in the PRISM?
   - A. Not present
   - B. Occurs in three or fewer natural areas (locations that are at least \( \frac{1}{4} \) mile apart) with no infested area* >1 acre or containing >100 individuals
   - C. Present in 4–10 natural areas, or with one occupied location >1 acre or containing >100 individuals
   - D. Present in >10 minimally managed areas
   - U. Unknown

   **Answer:** Widespread

   **Describe distribution:**
   Documented from 32+ sites on Long Island since 1980.
   **Sources of information:**
   Brooklyn Botanic Garden, 2010.

---

§Not Assessable: not persistent in the PRISM, or not found outside of cultivation.

PRISM
(New York Partnerships for Regional Invasive Species Management)
NON-NATIVE PLANT INVASIVENESS RANKING FORM

2. What is the likelihood the species will occur (if not yet present) or expand its distribution and abundance (if already present) in the PRISM?

Answer: Very likely

Documentation (e.g.: history of establishment in PRISM, suitability of habitats and climate, distribution models, literature, expert opinions):
Well established in PRISM.
Sources of information:
Brooklyn Botanic Garden, 2010.

B. INVASIVENESS RANK IN THE PRISM:

Is the species distribution Widespread or Common?
Yes: Go to column A in table below.
No: What is the likelihood of species occurrence or expansion? Answer: 

Very Likely: Use column A below
Moderately likely: Use column B below
Unlikely: Use column C below
Zero likelihood Invasive potential Insufficient
Unknown Invasive potential Unknown
Not assessed Invasive potential not assessed

Assign a PRISM invasiveness rank to the species based on its New York Relative Maximum Score, using the designated column in the table below.
